GeekZoneBooks.Com

Web Services & Training

GeekZoneHosting.Com

Join our group and attend each month to learn about web application programming technology, cloud hosting, web site hosting, security, server management, mobile device management and general info about what makes technology work.

On-Line-Interactivity.Com Web Based IDE Project

Why be a part of our group?

Our group will help you learn how to program web applications, find places to share your code, find places to host your code, find places to work, find places to teach others about your code and find ways to publish books about your code.

We invite you to apply for a new account if you have an interest in learning how to create web applications and web sites.

We have monthly and weekly meetings to share our projects and get help from other members. Members that want to use our on-line WebIDE tool will need to attend a meeting to have the access activated.

We meet

Monthly at Tullys in the Canyon Park Plaza in Bothell: 22615-C Bothell Everett Hwy Bothell WA 98021 (Subscribe to our site at <http://waptug.com> to get meeting announcements) and weekly at Cascadia College room CC2-211 at 12:15 on Thursdays.

About Our Project

Our site is powered by the CODIAD Web IDE and WordPress Multi-Site Networking to allow you to **create a project portfolio blog** and **create web projects** and edit the code with out needing any client desktop programming tools. This WebIDE allows you and your team to work on the same document remotely at the same time collaboratively via text chat and voice chat. This provides you with a fantastic tool to build working code and see it run instantly and build your project blog portfolio.

About our Mission

We began this mission in 2009 to bring about a set of tools and web services for students interested in beginning the journey into becoming web application programming technology professionals. Our server at the college went live in 2015.

We saw a need for a low cost set of on-line tools that would allow a student to provision a virtual private server and have a web development integrated development environment on-line that was **persistent after each quarter of college** and that would **last past graduation** to allow a student portfolio to be utilized for obtaining work.

We wanted to give students the means to blog about and track their 10,000 hours of focused practice for developing their ability to craft working web applications and build beneficial web site work portfolios that would show case their talents and inspirations.

About our team

This is a joint project between the following groups: **On-Line-Interactivity.Com** - Web Development Application IDE **WapTug.Org** - Web Applications Programming Technology Users Group, **GeekZone-Hosting.Com** - Web Hosting Services (Sponsor who is paying for the vps hosting space) **MichaelScottMcGinn.Com** - Web Developer that created this project and **NGITclub.Com**—The Next Generation I.T. Club of Cascadia College

WapTug.Org—Gaming Server

WapTug.Net—Web IDE Site

WapTug.Com—Project Blog and Social Network
